

Paul,

The Carey road speed study was completed yesterday, Thursday, October 21, 2004.

There are 200 samples. One-Hundred are samples of traffic coming from the north, and one-hundred are samples of traffic coming from the south. These samples have been divided into two sections of the road, as you requested. (Carey road between 161<sup>st</sup> and 171<sup>st</sup>) (Carey road between 171<sup>st</sup> and SR 32) There are also two, off-peak times of day, morning and afternoon. I have used an \* to denote speeds taken from large trucks. If any of this information is unclear or you have any questions, please call.

Thank-you, Adam Essex

## Carey RD Speed Study

Between 161st and 171st

9:00 am to 11:30 am

Between 171st and ST RD 32

[illegible]
